

# genisys xvi solution Backboard

Carnation Designs secured a three year contract with Merseyside Police, one of the UK's most forward thinking police forces, to design and supply mission-critical auxiliary electronics control in the shape of a fully assembled, pre-wired and tested police equipment board.

Using the very latest **genisys** technology the backboard is a 'one type fits all' equipment board that is installed in police vehicles as a single integrated unit.

## Key Features

- Genisys xvi, CANbus Interface, opti-link lightbar controller module and protocol converter in single integrated system
- Rapid installation and interchange of equipment via twist lock connectors
- Test units to assess wiring harness integrity during pre-delivery inspection
